Istanbul Education Academy

2016-2023● Finance and Project Manager

Asist BT

2010-2011● Technical Support

PTT Head Office

EDUCATIONS

2023-2024● Software Engineering Education

Istanbul Education Academy

2019-2024● Management Information Systems

Istanbul University

2012-2016● Faculty Of Banking and Insurance

Marmara University

2008-2012● Database Programming

Sabiha Gokcen Anatolian Technical High Schools

PROJECTS

● Snake Game

Kullanılan Diller ve Teknolojiler:
HTML, CSS, JS

The player controls the snake so that it eats the food and grows. In the project, the basic structure and area of the game were created with HTML. There is also an information panel to show the score and other game information. The appearance and interface design of the game is customized with CSS. The logic and functionality of the game was created with Javascript. The movement of the snake, the random placement of the baits, the growth of the snake as it eats the baits, and the player's tracking of the score are all provided by js.

● Store App

Kullanılan Diller ve Teknolojiler:
C#

You can add products to your cart, make payments by checking the stock, and print the receipt/invoice information after completing your shopping. Additionally, you can add new products to the store and update product prices and stock. You can quickly view sales reports and graphs, as well as easily process product returns.

- **Cv App Project**

Kullanılan Diller ve Teknolojiler:

Database connection is established through API requests with MongoDB integration. Our HTML page includes a visual CV form that enables real-time data capture and display. We can capture and display data simultaneously using the "onkeyup" event. The edit form allows us to add new fields to the CV. The CV covers personal information, education, experience, projects, social media, and skills areas

- **SQL School Database**

Kullanılan Diller ve Teknolojiler:

Ms SQL

I worked with 13 tables in my School Project. In this project, I created 3 Procedures and 2 View Queries
